

“I am glad I encouraged my partner to go for Voluntary Medical Male Circumcision”

It will benefit both of us because now we have reduced the risk of contracting HIV. After circumcision we agreed to abstain from sex for the recommended six weeks to allow for healing. We plan to continue practicing other HIV prevention methods such as being faithful to one another, using condoms every time we have sex and knowing our HIV status.

Your man can get circumcised too. Just visit any government health facility with him and talk to a doctor about voluntary medical male circumcision. It is offered to men of all ages.

Support your partner. You will not regret it.

VMMC services are available at all government health facilities for FREE.
