

Research on MMC Devices

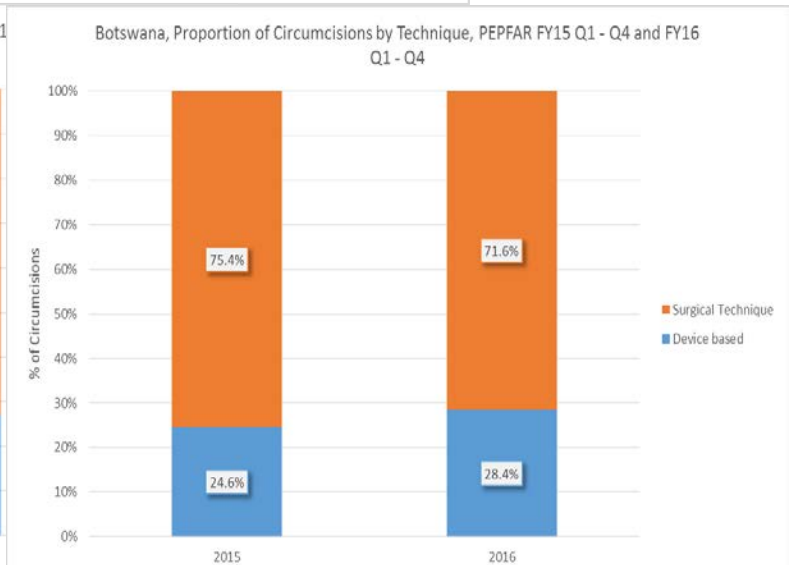

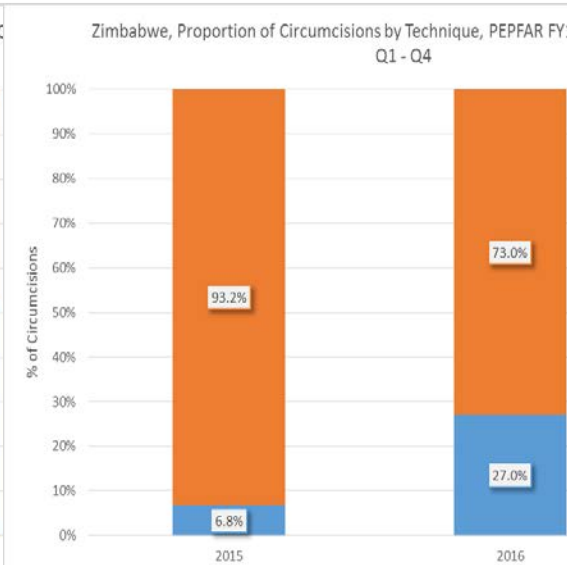

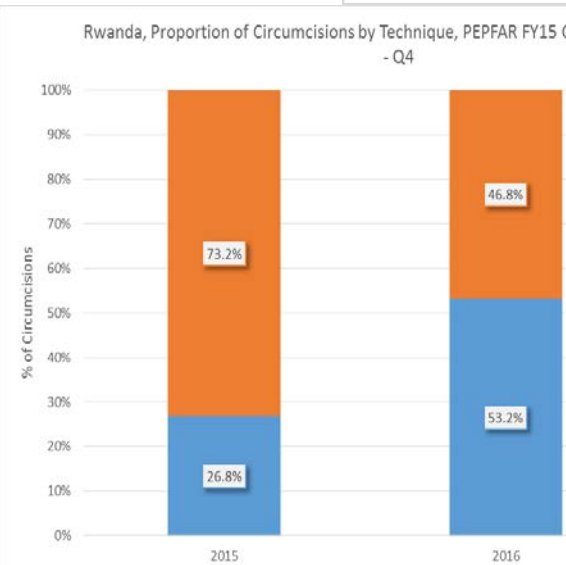

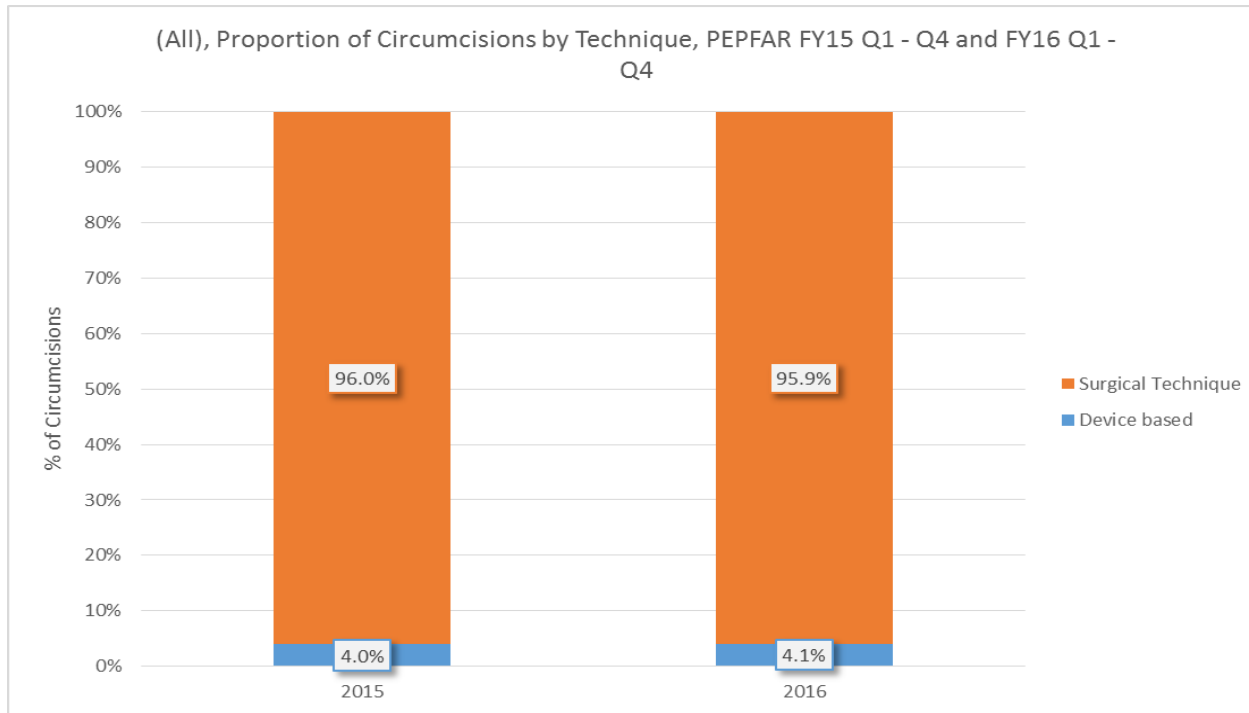

Renee Ridzon, MD

Office of the U.S. Global AIDS

Coordinator

and Health Diplomacy

Device Based VMMC

PrePex

- EIMC
 - Small studies in Rwanda and Kenya completed
- Removal of foreskin at the time of placement
 - Study underway in Rwanda
- Use in clients with HIV
 - safety
 - wound healing, viral load, viral shedding CD4 counts
- Use in 10-14 yos with adhesions/phimosis

ShangRing

- Submitted to WHO PQ
 - 10-12 year olds
 - no-flip technique
 - topical anesthetic
 - spontaneous detachment with no-flip
 - fewer sizes
- Use for EIMC

EIMC

- Kenya
 - Provider preference Mogen vs AccuCirc vs PrePex
 - Pilot study of Accucirc
 - Follows on clinical research studies recommended by WHO
