Male Circumcision for HIV Prevention

Conclusive research shows that medical male circumcision substantially reduces men's risk of acquiring HIV through vaginal sex, making it an important addition to HIV prevention strategies in eastern and southern Africa.

News & Events

AIDS 2012 Conference in Washington DC, 23-27 July: Male circumcision for HIV prevention will be highlighted in more than 70 presentations and abstracts at the [XXIX International AIDS Conference](#) in Washington, DC...

Essential Reading

[Communication Male Risk Adaptation Guide](#) (2012, PDF, 1.98 MB).

This publication was produced by the Communication for Change (C-Change) project and offers comprehensive guidance to communication programmes scaling up services in new settings. It outlines a 10-step, participatory process for adapting male risk to make them appealing and relevant to new audiences.

[Joint Strategic Action Framework to Accelerate the Scale-Up of Voluntary Medical Male Circumcision for HIV Prevention in Eastern and Southern Africa](#) (2011, PDF, 264 KB).

This document articulates a five-year framework to guide accelerated scale-up of VMMC for HIV prevention in selected priority countries in eastern and southern Africa. It is intended for use by key stakeholders to collaborate and coordinate efforts with other programmes.
