

“I’m glad I went for Male Circumcision...”

I care about my health and getting circumcised has reduced my chances of getting infected with HIV. Of course I continue to practice other HIV prevention methods like abstinence, being faithful, using a condom every time I have sex and knowing my HIV status and that of my sexual partner. You too can get circumcised. Just visit any government health facility and talk to a doctor about it! Male circumcision is offered to men of all ages. ...If I can do it, you can do it.

VMMC services are available at all government health facilities for FREE.
